

# DaaS Description

---

The goal of this assignment is to define a concrete example of DaaS descriptions based on DEMODS model (<http://www.infosys.tuwien.ac.at/prototyp/SOD1/demods.html>). Given your work on assignments 1-3 for your selected DaaS and data concerns, in this assignment you create

- A DEMODS-based DaaS description for the selected DaaS/Data marketplaces.

Your proposed/real data contracts cover, *at least, some data resources, their pricing models, their quality, and their data rights.*

You can of course extend the DEMOS description model if you wish or you can develop your own models in RDF, JSON, etc., based DEMOS. *The report is an XML-based document with inline explanation.* The final report should be submitted by **Friday 23.05.2014** to [truong@dsg.tuwien.ac.at](mailto:truong@dsg.tuwien.ac.at).
