

Evaluating Data Concerns

The goal of this assignment is to examine techniques for evaluating DaaS concerns. Given your understanding of the main DaaS concerns for open government data and for (near) real-time/static open sensor data for city management in the 1st and 2nd assignments, in this assignment you are asked to

- 1) Select *some data concerns* for either *open government data* **or** *near real-time open sensor data for city management*, **and**
- 2) Discuss and argue your selected evaluation scopes, evaluation modes and integration modes for your *selected data concerns and types of DaaS* (either open government data or near real-time open sensor data for city management)

The report should be limited to 2 pages in IEEE computer society format template (<http://www.computer.org/portal/web/cscps/formatting>).

The report should be submitted by **Wednesday 21.11.2012** to truong@dsg.tuwien.ac.at.
