DaaS Description

The goal of this assignment is to define a concrete example of DaaS descriptions based on DEMODS model (http://www.infosys.tuwien.ac.at/prototyp/SOD1/demods.html). Given your understanding of DaaS, data marketplaces, and the main DaaS concerns for open government data and for (near) real-time/static open sensor data for city management in the first three assignments, in this assignment you are asked to

1) Select *a DaaS/Data marketplaces* for either *open government data* **or** *near real-time open sensor data for city management,* **and**
2) Produce DEMODS-based DaaS description for the selected DaaS/Data marketplaces with your evaluated data concerns (e.g., accuracy), your proposed/real data contracts, and prices.

 The report is an XML-based sample with inline documentation. *You must be able to present your draft report on* **Friday 23.11.2012** *during the discussion of assignments*. The final report should be submitted by **Monday 26.11.2012** to truong@dsg.tuwien.ac.at.
